R. BAKER & Son **ALL INDUSTRIAL SERVICES, INC.**

As the extensive renovation of the United Nations Headquarters in New York City recently drew to a close, R. Baker & Son crew members were onsite as usual, positioning large sculptures and other historic artifacts on the headquarters' newly-restored North Lawn. Baker crews had, in fact, been a fixture at the complex for the entire duration of the \$2.2 billion Capital Master Plan (CMP) project, participating in the original sculpture relocation, removal of the iconic green glass curtain wall from all 39 stories of the Secretariat Building, and interior renovation throughout the facility including the General Assembly Hall.

The United Nations is host to an expansive collection of import artworks and historic objects donated by countries throughout the world. One of R. Baker & Son's first tasks on the campus was to relocate the large sculptures from the North Lawn to a staging area located on the 18-acre site. Eight years later, most of the same crew members were on hand to help reinstall the artifacts throughout the newly-restored grounds.

The U.N. overhaul is one of numerous projects over the years in which R. Baker & Son was entrusted with priceless national treasures and important artifacts, including the 2012 renovation of the Statue of Liberty, rigging of the aircrafts onto the Intrepid Sea, Air and Space museum, and installation of the 9/11 museum exhibits which included extensive restoration work following Super Storm Sandy. R. Baker & Son is extremely proud to have been an instrumental part of these historic projects.

- UN Conference Building North & South Curtain Wall Abatement & Demolition Project
Dismantle, remove and recycle Curtain Wall Structure, doors and glass. Demolish and remove soffits and concrete sidewalk to first joist. Remove and store pavers, install plywood protection.

BASF Catalyst Division

33 S Wood Ave, Iselin, NJ 08830

Exterior Façade, Curtain Wall and Solar Fins removal. including widows and framing.

R. Baker & Son is working in coordination with other trades to perform this work. The trades that we are working with are; abatement, carpentry and new curtain wall contractors. After abatement and weather wall installation, R. Baker & Son will remove solar fins in one section, utilizing carry deck crane and remove remaining framing with man-lifts. Job will be working on a bay by bay basis, from top to bottom, with the ultimate goal of removing and installing curtain wall in a systematic method to keep all trades working and synchronized.
